SUMMARY

Forward-deployed AI engineer who builds evals and reliability checks for agent systems. Works with Python, TypeScript/React, and Clojure. Built agent evals and codebase audits for an agent-written platform, and a diagrammatic reasoning benchmark.

SKILLS

AI/Backend: Python, Pydantic, InspectAI, LLM evaluation, testing (property-based, mutation, concolic, mockless), static analysis
Product/Infra: TypeScript, React, Vitest, Docker/Podman, Terraform, AWS, Hetzner, Linux

EXPERIENCE

Elendil Labs — **Remote**
Forward Deployed Engineer (contract) — *Jun 2026 – Sep 2026*

- Third engineer on an AI workflow platform for capital-markets clients. Codebase was largely agent-written Python (Pydantic, Prefect, Terraform/AWS).
- Built an agent loop that rewrites tests to maximize bugs caught over line coverage. Cut 22% of tests with no loss in bug detection; adopted as the testing standard in our shared agent plugin.
- Audited the platform's data models and settings with static analysis, finding 14 groups of duplicate models and 156 settings that failed silently. Proposed a replacement design the lead engineer adopted in the platform rebuild.
- Evaluated an LLM pipeline that gave agents memory of past meetings, testing its entity resolution, completeness, and resistance to hallucination. Showed plain keyword search (BM25) did as well without the ingestion cost, so the team stopped shipping it.

Stage 11 Agentics — **Remote**
Founding Engineer — *Feb 2026 – May 2026*

- Built and ran an agent workflow that researched businesses from public lien filings for sales outreach (Apollo, Clay, open-source intelligence, human review). Contacted 52 promising leads from 800 filings, then ported the prototype to Frappe.

Fractal Tech AI Accelerator — **Brooklyn, NY**
Engineering Fellow — *Sep 2025 – Feb 2026*

- **DistinctionBench:** Built an InspectAI benchmark for diagrammatic reasoning across five frontier models and 2,000+ samples. Found that changing notation alone moved one model's accuracy from 40% to 100%.
- **House of Bao:** Created a React/TypeScript math game (offline PWA). Went from concept to playtested demo in two weeks.

Zo Computer — **Brooklyn, NY**
Full-stack Intern — *Oct 2025 – Nov 2025*

- Built Linear, Dropbox, and Airtable agent-tool integrations across UI and backend. Reduced worst-case error payloads from ~50,000 tokens to <100 through structured truncation.

Environment and Climate Change Canada — **Calgary, Alberta**
Software Developer Co-op — *May 2023 – Jul 2024*

- Maintained several Dynamics 365 and Power Platform apps, closing 40+ tickets in C#, JavaScript, and Dataverse. Refactored 130+ JavaScript files for a cloud migration and built automated workflows linking APIs to legacy systems.

Under the GUI Academy Calgary — **Calgary, Alberta**
Owner / Manager — *Jun 2019 – Jun 2022*

- Ran a coding-education franchise branch: hired and managed 5 instructors, taught 100+ students Python and Unity, and ran workshops and camps for 1,300+ students funded by a $13K CanCode grant.

EDUCATION

University of Calgary — **Calgary, Alberta**
Bachelor of Science, Computer Science — *Dec 2024*

University of Calgary — **Calgary, Alberta**
Bachelor of Arts, Communications and Media Studies — *Dec 2024*
